NanaWall® 
Bringing the Outdoors in

A truly magnificent home design embraces the best of the surrounding landscape. A broad vista of ocean waves, mountaintops or a rustic country garden are features that add to the beauty and atmosphere of a custom home.

This book is a collection of beautiful homes designed by noted architects. The elegant NanaWall creates a bridge between indoors and outdoors for a powerful sense of place. Experience the incomparable freedom of a wide open NanaWall and feel secure in the knowledge that it is weather-tight and energy efficient.

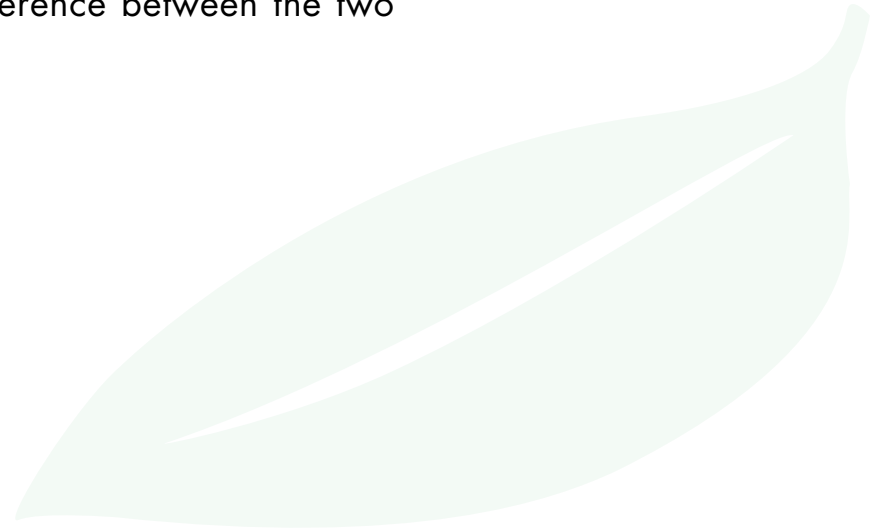

We invite you to turn the following pages and view recent architectural projects accompanied by comments from architects who have selected the NanaWall System.

“A home does not stand separate from it’s surrounding. The concept of a Not So Big House requires the careful design of the transitions between interior and exterior. Moveable glass wall systems effortlessly create larger or smaller “rooms” as needed, and allow the most efficient use of available space. You get two completely different spatial experiences, depending upon whether the wall system is open, or closed, and to experience the difference between the two is nothing short of amazing.

Sarah Susanka, FAIA
Author, Architect & Cultural Visionary

“The principle of traditional Japanese residential architecture, Inside Outside, is successfully incorporated in this design that combines the exterior environment with the interior space so that the two become unified. Our use of the Nana folding door (NanaWall) enables us to achieve this aesthetic.”

Hiroshi Morimoto, AIA
MORIMOTO ARCHITECTS
Berkeley, California

“We have been using NanaWall Systems in our custom homes for the last six years. As a designer and builder the doors offer us amazing flexibility in design. They truly have the ability to bring the outside into the interior of our homes to maximize the views and circulation.”

Roger MacPherson
MacPherson Construction
Seattle, Washington

“The NanaWall allows us to connect the inside to the outside not only visually, but physically. And, they are remarkably easy to operate.”

Curtis Gelotte, AIA
Curtis Gelotte Architects
Seattle, WA

“The NanaWall SL70, provided the opportunity for this truly spectacular penthouse site to engage with the view of downtown San Francisco and open up the living space to the exterior. The severe wind-loading and technical requirements of the installation were satisfied easily allowing us to meet all the demands of the design.”

James A. Walbridge, A.I.A.

Tom Carson, Assoc. A.I.A.

Tekton Architecture, Inc.

San Francisco, California

“The NanaWall allows the client to fully join the treehouse screen porch with the living space. The southeast breezes are pulled from the outside all the way through the main floor of the house, making for balmy, bug-free evenings much of the year. Effectively, the NanaWall doubles the size of the living room and imparts a sense of spaciousness that would otherwise be unattainable.”

Heather McKinney, AIA
McKinney Architects
Austin, Texas

“The NanaWall is the latest high-end innovation for media rooms. It creates more space, while maintaining proper acoustic protection. We recommend the NanaWall because it expands the space of the media room, turning it into a multi-purpose room for entertaining family and friends.”

Matt Denos

Low Voltage Architecture, Inc.

Los Angeles, California

“This modest home in central Austin utilizes the NanaWall to erase the division between inside and out. The owners moved the table out on the porch one day and never moved it back!”

Robert Jackson, AIA
Jackson & McElhaney Architects
Austin, Texas

“The old hay-loft of this 40’s barn was converted to the living, dining and kitchen area of this home. The NanaWall System allowed us to open the room into this new three-story screened porch with connecting catwalk over to the studio/office building. The wall actually stays open most of the year, and the air conditioning system is seldom on. The screened room between the two stone buildings acts like the traditional ‘dog trot’ buildings to increase the (passive cooling) air flow through the space.”

Robert Jackson, AIA
Jackson & McElhaney Architects
Austin, Texas

“We chose the NanaWall because we wanted to open up the dining area to include the beautiful view and incorporate the outdoors with the indoors. The NanaWall created a functional architectural element that allowed us to blend the beauty of the exterior with the comfort of the interior, while maintaining the structural integrity of the room.”

Tommy Chambers, ASID, IIDA
Tommy Chambers Interiors
Los Angeles, California

“When commissioned to design the typically pragmatic master bedroom addition, we decided to use what little programmatic area we were given to its fullest poetic advantage, a “more with less” approach. By lifting the addition on pilotis, the new bedroom is aligned with the former bedroom, creating a master suite. The terrace created beneath this addition provides shaded rest for the users of the pool and bocce ball court nearby. Folding open the large window wall (NanaWall) allows the custom bed to track out onto the elevated terrace—bringing the indoors out—permitting comfortable nights spent under the moon and stars.
